Q&A

BUSINESS CENTRAL SECURITY SHOULDN'T BE CLOUDY

Can you give me a summary of your presentation?

We looked at security basic and key security settings and setups to help protect organizations using Dynamics 365 Business Central.

What did you hope the audience would gain/learn from your presentation?

Simple techniques to make their organization safer when they go back.

What was your favorite/most actionable information you gave?

Especially for companies that complain that they have a small staff, tight control of bank reconciliation is key.

When thinking about the current landscape of our industry, what do you see trending that you like?

There is significant movement to new products as companies move from on-premise applications to the cloud.

Where do you see the industry going? Is there anything that excites you for the future?

External threats, like ransomware, at least create a focus on security making it easier to explain the risks from internal threats.
